Defining Optimal Immunotherapies for Type 1 Diabetes (Novartis Foundation Symposium 292)

This book is a comprehensive and up-to-date account of where we stand in immunological strategies for preventing or treating type 1 diabetes (T1D).

The book brings together contributions from the leaders in the arena of clinical immunotherapy, not limited to the diabetes field exclusively, in order to delineate a road-map that would lead to future clinical trials. It integrates information from human and animal studies and considers T1D within the broader context of autoimmune disease. The format contains several discussions, which address specific questions and provides guidelines for future strategies and solutions for discovering a cure.

Publication Year: 2008
Edition: 1st
Author/Editor: Novartis Foundation
Publisher: Wiley
ISBN: 978-0-470-72325-8
Platform: Ovid
Product Type: Book
Speciality: Endocrinology & Metabolism
Language: English
Pages: 222
Illustrations: 0
