This book provides practitioners and students of rangeland management and wildland conservation with a diversity of perspectives on a central question: can rangelands be wildlands?

Rangeland ecosystems which include unimproved grasslands, shrublands, savannas and semi-deserts, support half of the world’s livestock, while also providing habitats for some of the most charismatic of wildlife species. This book examines the pressures on rangeland ecosystems worldwide from human land use, over-hunting, and subsistence and commercial farming of livestock and crops. Leading experts have pooled their experiences from all continents to cover the ecological, sociological, political, veterinary, and economic aspects of rangeland management today.

This is the first book to examine rangelands from a conservation perspective. Written by an international team of experts covering all geographical regions, it emphasizes the balance between the needs of people and livestock, and wildlife, as well as ecological, sociological, political, veterinary, and economic aspects of rangeland management and wildland conservation, providing a diversity of perspectives not seen before in a single volume.

Publication Year: 2010
Edition: 1st
Author/Editor: du Toit, Johan; Kock, Richard; Deutsch, James
Publisher: Wiley
ISBN: 978-1-405-17785-6
Platform: Ovid
Product Type: Book
Speciality: Biodiversity Conservation
Language: English
Pages: 448
