Ovid Addiction Book Collection

Cost-effective, convenient access to 22 books covering prevention, ethics, treatment, end-of-life care, nursing, and other topics.

Drug overdoses are the leading cause of accidental death in the United States. In fact, each day over 100 people die from an overdose—a number that has tripled in the last 20 years. Further, alcohol, tobacco, and illicit drug use costs more than $700 billion annually due to crime, lost work productivity, and health care.

With this new package, researchers and professionals involved in addiction and substance abuse issues have single-click access to over 20 books—from multiple sources—to help them with their work. Sixteen books have been designated a Doody’s Core Title or have received a Doody’s Review, and 9 of the books are exclusive to Ovid.
