Crop Science Archive (1931 to 1972)

A solid backfile of CAB's Crop Science Database, a great source of international scientific literature relating to field crops, fodder crops, and grasslands - available for one-time purchase.

Crop Science Archive covers such diverse subject areas as: agronomy, botany, physiology, biochemistry, field production, farming systems, and more. Cereals, legumes, root crops, fiber plants, oilseed plants, tobacco, sugarcane and other items are covered in detail.

It's an ideal source for all professionals and students requiring an international perspective on the wealth of information available on crops.
