Produced by an award-winning team of medical illustrators, biomedical visualization experts, and animators belonging to the Association of Medical Illustrators, this program is a great complement to other Visible Body programs such as the Human Anatomy Atlas, as it offers complex information distilled in short multimedia clips (30-60 seconds) accompanied by voice-over and text – allowing for easier understanding and retention. All animations are subtitled in English, French, German, Italian, Spanish, Simplified Chinese, and Japanese.

Videos are organized into the following packages:

- System Overviews
- Bones and Skeletal Muscles
- Respiration and Circulation
- Cells and Tissues
- Nutrition and Elimination
- Reproduction and Fetal Development
- Respiratory and Circulatory Pathologies
- Digestive and Urinary Pathologies
- Muscle and Bone Pathologies

Plus, users can take advantage of the mobile app for iPhone® and iPad® to watch these animations while on-the-go.
