Reviews in Medical Microbiology (RMM) is a quarterly review journal which provides a balanced coverage of the whole field of medical microbiology.

Each issue of RMM publishes state-of-the art reviews of the latest developments and techniques in medical microbiology, virology, mycology, parasitology, clinical microbiology, and hospital infection. Every review is a concise, authoritative, and readable synthesis of the latest information on its subject, and references are limited to the fifty key sources in each case.

RMM is the perfect way for both qualified and trainee microbiologists, and researchers and clinicians with an interest in microbiology, to stay fully informed of the latest developments in medical microbiology. The journal is a valuable resource for educational and teaching purposes.
