Indoor Air

Rely on Ovid as the trusted solution that transforms research into results

Published on behalf of the International Society of Indoor Air Quality and Climate

The quality of the environment within buildings is a topic of major importance for public health. The aim of the journal is to provide a location for reporting original research results in the broad area defined by the indoor environment of non-industrial buildings.

The journal has an international focus with multidisciplinary content. The papers reflect the broad categories of interest in this field: health effects, thermal comfort, monitoring and modelling, source characterization, ventilation and other environmental control techniques. The research results provide the basic information to allow designers, building owners, and operators to provide a healthy and comfortable environment for building occupants, as well as providing medical practitioners information on how to deal with illnesses related to the indoor environment.

Society affiliation: the International Society of Indoor Air Quality and Climate, an international scientific organization that supports the creation of healthy, productive, and comfortable indoor environments by advancing the science and technology of the indoor environment, and facilitating international communication and information exchange.

Impact Factor	4.396
ISI JCR Ranking	15/180 (PUBLIC, ENVIRONMENTAL & OCCUPATIONAL HEALTH), 6/62 (CONSTRUCTION & BUILDING TECHNOLOGY), 11/50 (ENGINEERING, ENVIRONMENTAL)
Author/Editor	William Nazaroff
Publisher	Wiley
ISSN	0905-6947
Platform	Ovid
Product Type	Journal
Speciality	General Engineering & Technology
Language	English
Frequency	Bi-Monthly
Coverage	March 2001 - Present
PDF Coverage	January 2001 - Present
