A reader-friendly resource which allows the reader to keep up-to-date with the most important advances in the pediatric field.

Each issue contains three main sections delivering a diverse and comprehensive cover of all key issues related to pediatrics; including genetics, therapeutics and toxicology, adolescent medicine, neonatology and perinatology, and orthopedics. Unique to Current Opinion in Pediatrics is the office pediatrics section which appears in every issue and covers popular topics such as fever, immunization and breast-feeding. In addition, the numerous review papers are complemented with one or two case reports in each issue. Current Opinion in Pediatrics is an indispensable journal for the busy clinician, researcher or student with condensed reviews, supplemented with References and Recommended Reading and Current World Literature - a thorough bibliography compiled from the top journals in the pediatric field.
