## Human Molecular Genetics

Rely on Ovid as the trusted solution that transforms research into results

Now in its thirteenth year of publication, Human Molecular Genetics has become one of the leading journals in this exciting frontier of scientific research. The journal concentrates on full-length research papers covering a wide range of topics in all aspects of human molecular genetics. These include: the molecular basis of human genetic disease; developmental genetics; cancer genetics; neurogenetics; chromosome and genome structure and function; gene therapy; mouse and other models of human diseases; functional genomics; and computational genomics. In addition, the journal also publishes research on other model systems for the analysis of genes, especially when there is an obvious relevance to human genetics.

Impact Factor	4.902
ISI JCR Ranking	31/171 (GENETICS & HEREDITY), 53/292 (BIOCHEMISTRY & MOLECULAR BIOLOGY)
Author/Editor	Professor Kay Davies
Publisher	Oxford University Press (OUP)
ISSN	0964-6906
Platform	OvidMD, Ovid
Product Type	Journal
Speciality	Medical Genetics Molecular Biology
Language	English
Frequency	Bi-Weekly (Fortnight)
Coverage	June 2001 - Present
PDF Coverage	March 2002 - Present
