European Journal of Soil Science

Rely on Ovid as the trusted solution that transforms research into results

Published on behalf of the British Society of Soil Science (and the National Societies of Soil Science in Europe)

Our understanding of soil continues to advance. Better instruments and new techniques allow us to penetrate its structure and monitor its behaviour. Developments in statistical theory backed by sound programming and more powerful computers are leading to more effective survey and spatial prediction. Long-term experiments continue to provide new insight into the soil's response to management. The knowledge and understanding gained are essential for managing land without its deteriorating, and for protecting and restoring it. They should also underlie sound policies in land use regionally and nationally.

This is one of the premier journals in the field, and fosters that understanding by publishing the latest significant findings of research, the description of new techniques, and up-to-date authoritative and critical reviews over the whole field of soil science and its applications.

Impact Factor	2.644
ISI JCR Ranking	10/34 (SOIL SCIENCE)
Author/Editor	M. Oliver
Publisher	Wiley
ISSN	1351-0754
Platform	Ovid
Product Type	Journal
Speciality	Soil Science
Language	English
Frequency	Bi-Monthly
Coverage	Vol 75 #1 (2005) - Present
PDF Coverage	Vol 75 #1 (2005) - Present
